PROJECTS

Mashreq — *Mobile banking application*

Mashreq is a bank in UAE, which has developed two mobile applications

The applications were built using AngularJS as frontend framework and I was responsible for creating layouts and functionalities in frontend side. I was also responsible for getting data from backend in JSON and displaying them in frontend.

Tamreen — *Learning platform website*

Tamreen is a learning platform that offers teaching resources inspired by

the 2022 FIFA World Cup Qatar.

This project is developed using Symfony framework. I was responsible for building frontend part from the beginning and maintaining it for other developments and bug fixes.

Website link: <http://tamreen.qa>

Landmark — *Business portfolio website*

Web based application for advertising agency. This website offers the ability to manage projects and content for different pages.

This project is developed using Wordpress as a content management system and BarbaJS for AJAX calls, giving the idea as a single page application.

Website link: <http://landmark.al>

Bukinist — *E-commerce website*

Web based application for selling online.

The project is developed using Prestashop as a content management system and Bootstrap as a front end framework. The theme used in this website is developed and created from scratch.

Website link: <http://bukinist.al>

Arild Sela — *Portfolio website*

Web based application for showcase of my projects.

The project is developed using Wordpress as a content management system. The theme used for this project is created from scratch.
